

1.1 About

Source Control is a necessary tool for developers and all programmers should have some level of fluency with it. During this semester, you will be storing your projects in a repository.

1.2 Requirements

Use the documentation provided (class lecture, external reading, asking questions) to complete the following:

1. Create a BitBucket account.
2. Create a private repository named “CS 250”.
3. Pull down your CS 250 repository to your local machine.
4. Create a “Labs” folder.
5. Within the Labs folder, create a “STL Lab” folder.
6. Within the STL Lab folder, copy your code from the STL Lab.
7. Add, commit, and push your changes.
8. Take a screenshot of your repository front page, and the STL files from the web interface. Upload these as part of the lab.
